Essential Medicines List

Supported by GFATM HSS SSF and WHO

Revised by

The Committee for Establishing the Essential Medicines List 2012

PREFACE

The essential medicines concept is now widely accepted as an evidence based, efficient, flexible, and forward-looking tool for focusing therapeutic decisions, professional training, public information, financial resources, and quality assurance efforts on those medicines which will have the greatest public health impact. Essential Medicines are the most cost-effective elements in modern health care and their potential health impact is remarkable.

The National Essential medicines list presents a list of minimum medicines needed for the basic health system in the country. It lists the most efficacious, safe and cost effective medicines for priority conditions prevailing in the country selected on the basis of current and future health relevance, and potential for safe and cost-effective treatment. The list support the systematic delivery of medicines in the health core system and it is a valuable tool for advocacy purchasing decisions and supply management in the country.

The first Cambodian Essential Medicines List was published in 1986. With assistance from UNICEF and MSF Holland Belgium, the first revision was done in 1993 followed by, and with WHO funding, the 2nd revision was prepared in 1995 and the 3rd revision in 1997 . Each revision of the list has been validated through National Workshop involving relevant experts in health sector.

A national committee for revising the Essential Medicines List was established in year 2000 to ease the process of revising the list every two years. Previously this function was undertaken through the National Workshop process which was later abandoned in favor of the EML committee.

The national committee for EML has conducted the 5th revision of this EML in year 2006 and the 6th revision in year 2009 which contained 489 items.

The current committee which came to effect in 2008, has undertaken the 7th revision of this EML in 2011 resulting to:

- 77 Oral medicines
- 53 Injectable medicines
- 11 External medicines
- 143 Medical consumables
- 298 for National Program medicines
- 582 Items, total in the 2011 EML

For the 7th version of EML (2011) , we would like to extend our sincere thanks to the following :

PREFACE

The essential medicines concept is now widely accepted as an evidence based, efficient, flexible, and forward-looking tool for focusing therapeutic decisions, professional training, public information, financial resources, and quality assurance efforts on those medicines which will have the greatest public health impact. Essential Medicines are the most cost-effective elements in modern health care and their potential health impact is remarkable.

The National Essential medicines list presents a list of minimum medicines needed for the basic health system in the country. It lists the most efficacious, safe and cost effective medicines for priority conditions prevailing in the country selected on the basis of current and future health relevance, and potential for safe and cost-effective treatment. The list support the systematic delivery of medicines in the health core system and it is a valuable tool for advocacy purchasing decisions and supply management in the country.

The first Cambodian Essential Medicines List was published in 1986. With assistance from UNICEF and MSF Holland Belgium, the first revision was done in 1993 followed by, and with WHO funding, the 2nd revision was prepared in 1995 and the 3rd revision in 1997 . Each revision of the list has been validated through National Workshop involving relevant experts in health sector.

A national committee for revising the Essential Medicines List was established in year 2000 to ease the process of revising the list every two years. Previously this function was undertaken through the National Workshop process which was later abandoned in favor of the EML committee.

The national committee for EML has conducted the 5th revision of this EML in year 2006 and the 6th revision in year 2009 which contained 489 items.

The current committee which came to effect in 2008, has undertaken the 7th revision of this EML in 2011 resulting to:

- 77 Oral medicines
- 53 Injectable medicines
- 11 External medicines
- 143 Medical consumables
- 298 for National Program medicines
- 582 Items, total in the 2011 EML

For the 7th version of EML (2011) , we would like to extend our sincere thanks to the following :

1- The committee for revising of EML:
